

Schema

AI-Powered Form Builder

Build forms by hand or generate them with AI. Collaborate in team workspaces. Publish, embed, collect responses, and track analytics — all type-safe, end to end.

PROBLEM

Form tools force a trade-off

- **Polished but locked-in** — Typeform-class UX — expensive, closed, hard to self-host.
- **Powerful but ugly** — Open/free builders are clunky, dated, break on mobile.
- **AI bolted on as an afterthought** — A chatbot, not real form generation you can trust.
- **No real collaboration** — Shared logins or copy-pasted links; no roles, no workspaces.
- **Type drift between front and back end** — A backend change silently breaks the UI.

SOLUTION

One platform, three superpowers

Create

Hand-build or AI-generate forms with 14 field types, logic jumps & scoring.

Collaborate

Team workspaces with OWNER / ADMIN / EDITOR / VIEWER roles & invites.

Convert

Publish, embed, QR — then watch responses & completion rate live.

Everything a form needs — in the box

- **14 field types** — text, choice, rating, date & more
- **Logic jumps & scoring** — branch by answer; build quizzes
- **Drag-drop + bulk import** — reorder, duplicate, paste a list
- **Themes & screens** — welcome / thank-you / redirect
- **Public slug + iframe embed** — `/f/:slug` with `embed.js`
- **QR codes & draft auto-save** — resume where you left off
- **Access control** — password, response limit, expiry
- **Hidden fields** — capture UTM / query params

AI

AI that builds the form, not a chatbot

- **Prompt → full form** — title, description & 4–12 typed fields in seconds
- **Improve a label** — one-click rewrite to a clearer question
- **Suggest next fields** — context-aware recommendations
- **Prompt-injection guarded** — attacks fall back to a safe default
- **Zod-validated output** — AI never writes unvalidated data

sub-second generation

HOW IT WORKS

End-to-end type safety is the moat

- **One contract, zero codegen** — the router defines the API once; the UI infers types
- **Backend change → UI fails to compile** — no silent drift, fewer prod bugs
- **Same router = REST + tRPC + OpenAPI** — auto Scalar docs at /docs

Built for teams, not just individuals

- **Workspaces with real RBAC** — OWNER / ADMIN / EDITOR / VIEWER, enforced server-side
- **Secure email invitations** — signed tokens, 7-day expiry, email-match on accept
- **Full member management** — invite, remove, change role, leave, revoke
- **Forms move freely** — between personal space and shared workspaces
- **Templates & cloning** — publish a form as a template; clone public forms

Know what's working — in real time

- **Live dashboard** — share tab polls every 5 seconds
- **Time-series & admin stats** — trends per form and across all forms
- **Response browser** — date filters, pagination, XLSX export

STACK

Modern, boring-where-it-counts stack

Monorepo

Turborepo · pnpm workspaces

Frontend

Next.js 16 · React 19 · Tailwind v4 · Radix · Motion

API

Express 5 · tRPC v11 · TanStack Query · OpenAPI/Scalar

Data

PostgreSQL 15 · Drizzle ORM · Zod v4

Auth

JWT (httpOnly cookies) · bcrypt

AI

Groq SDK · Llama 3.3 70B

WHY SCHEMA

The open, type-safe Typeform alternative

	Schema	Typeform	OSS builders
Beautiful UX	✓	✓	—
Real AI generation	✓	partial	—
Team RBAC + invites	✓	paid tiers	rare
Self-host / own data	✓	—	✓
End-to-end type safety	✓	n/a	rare

LIVE

Shipped & running today

- **Full platform live** — auth, forms, AI, workspaces, submissions, analytics
- **Production deploy** — notyourtypeformx.onrender.com
- **Type-checked & linted** — green build across the monorepo
- **Seeded demo data** — forms, responses, workspace, templates

WHAT'S NEXT

Roadmap & the ask

ROADMAP

- Payments & paid plans
- Webhooks & integrations (Zapier, Slack)
- File uploads & e-signatures
- Advanced analytics & A/B tests
- Custom domains for public forms

THE ASK

Looking for

design partners + early teams

to shape the roadmap and prove the team-collaboration wedge.
